## Croton Holds Public Workshop on the Croton – Harmon Station Parking Facility Feasibility Study

*[Croton-on-Hudson, January 12, 2010]* The Village of Croton-on-Hudson and its consultant for the Parking Facility Feasibility Study, Timothy Haahs & Associates, Inc., will conduct a public workshop on Wednesday, January 27th. The purpose of the workshop is to gather public input regarding the future development potential of the Village-owned parking lot at the Croton-Harmon Station, including development of a parking structure for transit patrons.

All residents, merchants, transit station users, and other stakeholders are encouraged to attend in order to share concerns associated with the parking facilities currently in place and potential future modifications.

The Village and the Consultants value your opinion and are eager to listen to your ideas on how to improve the parking system adjacent to the transit station. We look forward to seeing you there.

If you are unable to attend the meeting, comments will be accepted by e-mail after January 27th at: [vgagliano@timhaahs.com](mailto:vgagliano@timhaahs.com) with subject line, "Croton Parking Lot" or by mail to Janine King, Assistant Village Manager, 1 Van Wyck Street, Croton on Hudson, NY 10520.

Where: Harmon Firehouse  
When: January 27, 2010  
Time: 7:30 pm-9:00 pm

Background: The Village has just completed a flood mitigation project that raised the surface level of approximately 5.3 acres of the lot at a cost of just over \$3 million. This work solved the immediate need to avoid flooding conditions at the commuter lot during storms or unusually high tides. The long-range planning for the commuter hub is just as critical. The Village has contracted with a specialist in planning for commuter parking facilities, Tim Haahs Associates ([timhaahs.com](http://timhaahs.com)). The scope of work for the Haahs Associates study is a comprehensive process that will look at (1) market demand for commuter parking, (2) geotechnical conditions under the existing surface lot, (3) financial feasibility analysis for funding and operating a structure, and (4) design concepts for a potential parking structure at the Croton-Harmon Train Station. This study will also review the overall site to produce a master parking plan addressing how future work can improve traffic flow, enhance safety, and maximize commuter services.
